PUNKUZ SHAH

SENIOR FULL-STACK SOFTWARE ENGINEER

Melbourne, VIC | +61 468 405 356 | punkuzshah1@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 9+ years of experience building TypeScript/Node.js, React and AWS applications. Delivered customer-facing products, secure healthcare data workflows and automated data pipelines processing PDFs from thousands of websites. Experienced in technical leadership, microservices, event-driven architecture, testing and code review. Independently building a cross-platform desktop product.

TECHNICAL SKILLS

Languages : JavaScript, TypeScript, Python, Go

Frontend: React, Redux, Next.js, Vite, HTML/CSS, Three.js, D3.js

Backend & APIs: Node.js, Nest.js, Express.js, Gin, REST API, GraphQL, WebSockets, Socket.io

Cloud & Delivery: AWS (Lambda, S3, SQS, EC2, CodePipeline), Docker, CI/CD

Database & Messaging: PostgreSQL, MySQL, MongoDB, Elasticsearch, Redis, DynamoDB, RabbitMQ, Kafka,

Testing & Engineering: Jest, TDD, Unit/Integration/E2E tests, SonarQube, Grafana

Architecture: Microservices, Event-driven systems, API design, Design patterns

PROFESSIONAL EXPERIENCE

ADEVIFY LABS | Senior Software Engineer Mar 2024 – Sep 2026

- Delivered QuickAppz functionality across TypeScript/Node.js backend services and React/Vite interfaces, connecting API development with customer-facing workflows.
- Designed backend APIs and reusable application components, applying modern API patterns and separation of concerns to keep features maintainable.
- Improved code quality through SOLID principles, design patterns, code reviews and automated engineering checks.
- Mentored junior engineers and supported the adoption of AI-assisted development tools, including GitHub Copilot, Claude Code and Codex.

AWWCOR INC | Node.js Developer Jul 2021 – Feb 2024

- Developed TypeScript/Node.js microservices and stateless APIs for AWS-based applications, supporting modular backend delivery.
- Built serverless and event-driven processing components using AWS Lambda, SQS and S3 for application and data workflows.
- Implemented healthcare data-transfer workflows involving S3, SFTP, signatures, checksums and encryption for secure file exchange.
- Worked with EC2, Elastic Beanstalk and CodePipeline alongside CI/CD processes to build and deliver cloud-hosted services.
- Applied TDD, design patterns and code-quality practices to support reliability, maintainability and release confidence.
- Integrated SonarQube for static code analysis and quality monitoring, and used Grafana dashboards to monitor application performance, identify issues, and improve system reliability.

PODAMIBE NEPAL | Backend Developer May 2020 – Jul 2021

- Led delivery of the Topnotch Athletes platform, working with two developers and a DevOps engineer across Node.js, React, MongoDB, AWS and Socket.io.
- Built APIs and a third-party Autodesk customer portal integration using Node.js, Sequelize and PostgreSQL.
- Developed customer-care and real-time support applications using Node.js, MongoDB, Socket.io, Asterisk and SIP.js.

TEKKON TECHNOLOGY | Full Stack Developer Mar 2019 – Apr 2020

- Built data-extraction pipelines to process PDFs from thousands of mining-company websites using Node.js, Puppeteer, Cheerio, AWS Lambda and SQS.
- Developed a full-stack social networking platform for schools, building interactive React interfaces and GraphQL APIs with Node.js, MongoDB, and AWS.
- Created visualisation-heavy web features with Three.js and D3.js, and added unit, integration and end-to-end tests.

PARIJAT INFOTECH | Web Developer Jan 2017 – Feb 2019

- Built Node.js/Express APIs for e-commerce applications using MongoDB and AWS.
- Designed and developed the complete backend REST API for a Japanese news publishing platform using Node.js, Express.js, and MongoDB.
- Developed responsive React user-interface components with HTML and CSS, and wrote Jest unit tests.

INDEPENDENT PRODUCT DEVELOPMENT

VEIL ASSIST Live Website Link | Side Project · macOS & Windows

- Developed Veil Assist, an Electron desktop assistant for macOS and Windows that combines on-screen context and live conversation input to provide real-time assistance during calls and presentations.
- Built authentication and session-credit management with Supabase, alongside a React/TypeScript companion website deployed on Cloudflare Workers.
- Packaged desktop releases for macOS and Windows, with automated checks and application tests, developing the product independently.

ADDITIONAL PROFESSIONAL WORK

Coding-Agent Evaluation & Tooling | Part-Time Engineering Work

- Developed reinforcement-learning task-authoring toolkits and coding-agent evaluation tasks, using Claude Code and Codex as authoring agents.
- Built grading and verification workflows that capture agent mistakes and check generated changes against task requirements.

CERTIFICATION

AWS Certified Solutions Architect – Associate

EDUCATION

Bachelor of Engineering, Information Science & Engineering

Visvesvaraya Technological University, India | 2012 – 2016
